

# **Low or Very Low WIN-PST Rating** **Conservation Activity Job Sheet** **(NJPest02)**

Participant \_\_\_\_\_ Crop Year \_\_\_\_\_

**Achieve an intermediate WIN-PST rating on the farm by using pesticides with a lower risk of leaching or runoff.**

Pesticides have different chemical properties relating to leaching, runoff and toxicity. Soils have different physical properties that relate to water movement. Combining pesticide with soil characteristics results in a relative risk assessment to humans or fish.

To determine which pesticides are acceptable there must be a WIN/PST run tailored to field location, soils and management system.

Crop Grown	Field #s	Acres	Pesticide	Date Applied

**Documentation Required:** Attach WIN/PST printout.

I certify that I have accurately reported the pesticides used on my farm as per the attached WIN-PST printout, and that the rating is intermediate.
